Advisor Advanced

Reliable security enhancing convenience

Security & comfort in one

A security system that offers more than security

UTC's Advisor Advanced security systems covers all aspects of security of your office, shop, building, allowing you to focus on your business. Standalone or as part of an Integrated system with access control, video, fire protection.

Flexible providing convenience

Advisor Advanced, with hybrid wired and wireless technology, can be installed with a wide variety of sensors, wired as well as wireless. Advisor Advanced can be used for intrusion as well as part of an integrated security management, using Advisor Management software. All the components of Advisor Advanced are designed to be elegant and unobtrusive. They blend in with your home decor. And when you use wireless components, you can place them where they won't get in the way but still do their job.

Simple to use

The Advisor Advanced keypad provides both visual and audio indicators and can be used with a PIN number, card or a combination of both. The viewing angle of the display and the beeper sound are adjustable so it's always easy to read and to hear. The advanced control panel provides quick and full menu browsing options and a help section via a built in "hint" key.

Easy to upgrade or expand

Every business is different, and every business owner has different concerns and needs. That's why our systems can always be tailored to your requirements. You can start with a simple system and expand as your needs evolve. UTC Fire & Security can help you determine the best system for your needs and budget, as well as how and where to install it. Advisor Advanced provides a perfect answer to applications ranging from small business and shops to higher security required applications, requiring EN grade 3.

Designed to serve

Advisor Advanced control panels are designed with service in mind. Their architecture allows fulfilling the needs of the user. Whether it is accessed by a code or a badge, or whether it is managing the system remotely, Security panels can be set up in different ways.

Integrated security management

Advisor management software provides Advisor Advanced with a way to drive simplicity and integrate multiple functionalities

1. An intuitive graphical user interface, able to provide dynamic floor plans

2. Using only one interface for multiple tasks: access control, digital video, intrusion and fire detection.

One uniform way to provide user access rights, regardless of the type of security system.

The ability to register and track visitors in the building or premises contributes to the safety and the security of personnel and building property. As the system is user-friendly and operated via a single user interface, it is easy to manage all security systems with a minimum of training.

3. Allowing users to create reports on the fly, thanks to advanced reporting capabilities

4. Scalable to multiple sites, multiple languages and multiple users

5. Aimed at an efficient alarm handling

Reliable system with remote connectivity

Reliable security

Advisor Advanced family has been extended with **EN50131 grade 3** control panels, ATS1500A, ATS3500A and ATS4500A, providing up to 512 wired/wireless zones and up to 1000 users. They support EN grade 3 detection devices, like DD1000 series including anti-masking. Our trusted experience, combined with the quality and reliability of our integrated security systems, allow our customers to meet their existing and emerging security challenges.

Advisor Configurator for Professional monitoring & remote services

More and more alarm system users connect their system to a professional alarm monitoring system. These specialized companies not only monitor systems around the clock, they also offer a wide variety of services and interventions to follow up on: performing health checks, remote service. They provide you with the 24/7 piece of mind.

Advisor Configurator (ATS5xx) is designed to remotely configure, diagnose and interact with all supported Advisor Advanced and ATS Master panels installed in the field. It provides remote service and maintenance capabilities.

With this high performing remote service software, monitoring operators are well equipped to service multiple events and panels, increasing service levels for professional customers.

Alarm verification

UTC's PIRcam, connected to the Advisor Advanced, is a state of the art and flexible wireless security solution, designed for small to medium sized businesses and integrates visual alarm verification by using passive infrared detectors (PIR) with built-in cameras, capturing sequence of images. This provides you with a quick and remote assessment of the situation, identifying real vs nuisance alarms.

Providing supporting data and images, in case of any alarm notification, will enable central monitoring personnel to service their customers more professionally.

The PIRcam provides the central monitoring station (CMS) with tools to prioritize events and allocate efforts more efficiently.

Staying in control... anytime anywhere

With its advanced communication features, Advisor Advanced lets you communicate with your system from anywhere in the world by different communication means. Whether you choose to use GSM/GPRS, or PSTN or control your systems using your existing Internet infrastructure (IP). For more secure transmissions, added GSM/GPRS back-up provides a higher security grade.

Mobile interactivity

Thanks to the support for GSM communication it is easy to control your Advisor Advanced security system by SMS or mobile app.

With Advisor Advanced mobile app, available on Android™ as well as on iOS™, you can check the status of your intrusion system, consult history and check events, all remotely. An easy way to stay in control of security on your premises.

Stylish designed Keypad

UTC offers a variety of keypads for Advisor Advanced security systems, all designed with functionality in mind. User friendly keypads enable you to manage and monitor alarm zones, fence zones, and inputs on site.

Advisor Advanced Panel Family

	ATSx500A platform			ATSx000A platform	
	ATS1500A (IP)	ATS3500A (IP)	ATS4500A (IP)	ATS1000A (IP)	ATS2000A (IP)
